## CLEANING & MAINTENANCE

# CLEANING & MAINTENANCE

1. After each use and especially when using bath salts or other similar products, clean the bathtub with fresh water and a clean non abrasive cloth. Doing this should help avoid the build up of lime scale.
2. Do not use acid or methanol based cleaning products as this may potentially effect the condition and lifetime of the bath.
3. Do not use a rough/abrasive cloth, particularly on the chrome overflow or waste.
4. Replace worn washers on dripping taps to prevent surface marking
