Maintenance of Copper Bathtubs

Naturally, copper metal is corrosion resistant hence copper bathtubs never rust.

Each Copper Bath and Brass Bath is coated with a lacquer that maintains the finish and means that the bath only needs to be cleaned by a nonabrasive, everyday bathroom cleaner and wiped with a soft cloth. The coating is durable and flexible, allowing it to stand up to the rigors of regular use.

All surfaces which are supplied plated with Tin, Nickel are supplied un-coated as all of these elements are non-oxidizing and will need no special maintenance other than cleaning with non-abrasive cleaners as used on the coated surfaces.

Warnings

- Never use any corrosive cleaners or ammonia and acid-based cleaners as these can damage the surface of the copper bath. Use a mild detergent or mild soap only.
- Avoid using steel wool and brushes as these can scratch the surface of your bath. Use a soft cloth for cleaning instead.
- Please dry the bath of whatever finish you have (copper, nickel plated, color paint) after every use otherwise it can have water marks.
- While bathing, make sure that the bathing substances that you add to the water are suitable for use in the copper tub. You should for example never use lemon in a copper bathtub.

Scratches

Copper is a soft metal and hence can get scratches easily, however owing to self-healing nature of copper, these scratches will disappear themselves as surface of copper constantly reacts with the air and gradually changes color and appearance. This is called the patina.

Instead of trying to repair the scratches, you should start loving them as these scratches, dents, and dings form the unique character of the copper and adds to the rustic feel of the metal product.
